DIGITAL LITERACY VITYARTHI PROJECT REPORT

NAME- PRANJAL BEHERA

REG NO: 25BCE10688

BRANCH: BTECH-COMPUTER SCIENCE AND ENGINEERING(CORE)

YEAR- 1ST YEAR(BATCH OF 2025)

COURSE-DIGITAL LITERACY

CODE-CSE0001

DATE-31/03/26

INTRODUCTION

This project focuses on developing digital literacy skills that are essential for students in today's technology-driven world. It covers a range of practical tasks designed to improve understanding of digital tools, online communication, and safe internet practices. Through activities like creating an infographic, building professional profiles on platforms such as GitHub, LinkedIn, and Kaggle, and practicing coding on HackerRank, the project emphasizes both technical and professional development.

In addition, the project includes real-world applications such as writing professional emails, creating a digital awareness quiz using Google Forms, and analyzing a cybercrime case study based on UPI fraud. These tasks highlight the importance of responsible online behavior, clear communication, and awareness of digital risks.

Overall, this project represents a scenario where a student actively builds their digital presence, improves technical skills, and learns to navigate the online world safely and responsibly. It provides a strong foundation for academic growth as well as future career opportunities

TASK -1 Digital Literacy Awareness Infographic

For this task, I used **Canva** to design a digital infographic because of its user-friendly interface and wide range of templates. My design focuses on key aspects of digital literacy: **understanding what digital literacy means, practicing safe internet habits,useful digital tools and maintaining a professional online presence**. The infographic begins with a brief definition of digital literacy, highlighting the ability to effectively and responsibly use digital tools. It then presents essential safety practices such as using strong passwords, avoiding suspicious links, and protecting personal information. Lastly, it emphasizes building a professional online identity by maintaining a clean social media profile and using proper email etiquette.

The design uses simple icons, contrasting colors, and structured sections to make the information visually engaging and easy to understand for students. One challenge I faced was balancing content and design—ensuring that the infographic was informative without becoming cluttered. However, this process helped me better understand how to present information clearly and creatively. Overall, this task improved both my digital awareness and design skills.

TASK-2 Student Digital Portfolio

For this task, I created and updated my profiles on **GitHub, LinkedIn, and Kaggle**. Each of these platforms serves a different purpose and will be useful for my growth over the next few years.

GitHub is mainly used for storing and sharing code, so I plan to upload my projects there regularly and track my progress as I learn new technologies. It will also help me build a strong portfolio for internships and placements.

LinkedIn is focused on professional networking. I have updated my education details and will continue improving my profile by adding skills, certifications, and connecting with people from the tech field. This will help me stay informed about industry trends and opportunities.

Kaggle is useful for practicing data science and machine learning. I plan to work on datasets, explore notebooks, and participate in competitions to improve my problem-solving skills.

Over the next four years, I aim to use these platforms consistently to develop my technical skills, build a strong online presence, and prepare myself for real-world opportunities.

TASK 3 Exploring Coding & Collaboration Platforms

Part A: Coding Practice (HackerRank)

For the coding practice part, I used **HackerRank** and worked on the **Python problem series**. I completed a beginner-level challenge, which helped me revise basic programming concepts like input/output, variables, and simple logic building. While solving the problem, I understood how important it is to think step by step rather than jumping directly to the solution. It also improved my confidence in writing correct syntax and handling small errors. Overall, practicing on HackerRank made coding feel more structured and helped me build a stronger foundation in Python.

Part B: Google Workspace Collaboration

For this part, I created a **Google Form** based on a Digital Literacy Awareness Quiz with exactly five questions, including both multiple-choice and short answer types. I also linked the responses to Google Sheets, which allowed me to see the answers in an organized format. This activity helped me understand how data can be collected and managed easily. I found it interesting how quickly responses are updated in real time. I believe tools like Google Forms and Sheets will be useful for surveys, quizzes, and academic projects in the future.

TASK 4 Professional Email & Etiquette

A situation where poor digital communication can cause issues is when someone sends a message in a hurry without checking it properly. For instance, a student asking for help or an extension through an email that is too short, unclear, or casually written just like a casual text message might not be taken seriously. This can lead to misunderstandings or no response at all, which creates unnecessary problems.

This could have been handled better by taking a few extra minutes to write the email clearly and politely. Adding a proper subject line, explaining the situation in a structured way, and using respectful language makes a big difference. Also, checking for small mistakes before sending helps in avoiding confusion. Overall, careful digital communication shows responsibility and helps in building a good impression in academic and professional settings

TASK 5 Cybercrime Awareness Case Study & Prevention

While working on the UPI fraud case study, what surprised me the most was how easily people can be tricked into sharing sensitive details without realizing it. Many fraud cases do not involve complex hacking but instead rely on simple social engineering techniques like fake calls, messages, or payment requests. It made me realize that even basic mistakes, such as clicking unknown links or trusting unverified sources, can lead to serious financial loss.

After learning about this, one habit I plan to change is being more cautious while making online payments. I will always double-check UPI IDs, avoid sharing OTPs, and not respond to suspicious calls or messages. This task made me more aware of digital risks and the importance of staying alert while using online financial services.

CONCLUSION

This project helped me understand the importance of digital literacy beyond just using technology. I learned how to present information visually, build a professional online presence, and communicate effectively through emails. Practicing coding on HackerRank improved my logical thinking, while creating a Google Form showed how data can be collected and managed easily. The cybercrime case study made me more aware of online risks, especially related to UPI fraud. Overall, this project improved my technical, communication, and awareness skills, and it has prepared me to use digital tools more responsibly in both academic and real-life situations.
